Are you interested in gaining research experience?

We are looking for enthusiastic and committed undergraduates to collaborate on research projects that involve the study of insect nutritional symbioses.

If you are interested in attending graduate school, med school, or working in a research setting, this is a great opportunity for you to gain practical lab experience and participate in an ongoing research program in an active lab. We are looking for students who are quick to learn, motivated, detail orientated and reliable. Previous lab experience is not essential; however, enthusiasm and a strong desire to learn new skills and show initiative are required.

REQUIREMENTS: You need to have completed introductory biology, and plan to enroll in upper division courses in evolutionary biology, genetics, microbiology, and/or molecular biology. Research opportunities will require a ~10 hour/week commitment over the semester.

INTERESTED? Send a single page letter, by email, to Dr Alex Wilson (acwilson@miami.edu) and Ed James (ebj26@miami.edu). Include your letter in the body of the email – PLEASE DO NOT SEND ATTACHMENTS! Outline relevant experience, relevant completed course work and grades, your major, GPA, year in school, future goals and in THREE (3) sentences tell us about one thing you learned in introductory biology that made you think: “WOW!”. Review of applications will begin immediately. For full consideration send your application before January 25th 2019.
