STEVEN GREEN
James W. McLamore Outstanding Service Awardee

Steven Green, Professor of Biology, came to the University of Miami in 1978 from Rockefeller University, where he earned his Ph.D. and served as a graduate fellow and Assistant Professor. His research has focused on behavioral ecology and ethology, with special emphasis on conservation biology and tropical biology. His international efforts to protect endangered species and regions led to the establishment of the Kalakad Reserve in India and the Tiwai Island Wildlife Sanctuary and Loma Mountains National Park in Sierra Leone. His service to the UM community ranges from the Employee Benefits Committee, where he contributed greatly to the refinement and extension of benefit plans, to his leadership on key committees of the Faculty Senate and his role as Senate Chair from 1998 to 2002. Professor Green’s contributions to the University and beyond are vast and varied, but all have been marked by great energy, rich creativity, and a profound interest in the well-being of all inhabitants of the earth.
